DETAILED ACTION

Allowable Subject Matter

1. Claims 1-4 are allowed. The following is an examiner's statement of reasons for allowance: The prior art of records does not teach or suggest the limitations "An optical communication multiplex device for a vehicle comprising: optical communication lines connecting a transmitting terminal (Tx) to a receiving terminal (Rx); contact resistances disposed near said optical communication lines to generate heat for changing the length of said optical communication lines; a power terminal and a ground terminal respectively connected to one end and the other end of said contact resistances to thereby supply power to said contact resistances; a control terminal for outputting a control signal for changing the length of said optical communication lines via said contact resistances supplied with power from said power terminal; and a transistor connected between said control terminal and said contact resistances for carrying out a switching operation of power applied to said contact resistances from said power terminal in response to the control signal inputted from said control terminal" in claim 1. The closest prior art, Yudasaka (US publication no. 2004/0087068) discloses method for forming thin film, apparatus for forming thin film, method for manufacturing semiconductor device and electronic apparatus and Tuckerman et al. (US patent no. 5,541,524) discloses a device for burn-in technologies for unpackaged integrated circuit, either singularly or in combination, fail to anticipate or render the above underlined limitations obvious.

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- a. Allen et al. U.S. patent no. 5,469,199. Wide inkjet printhead
- b. Mori et al. U.S. publication no. 2002/0001776. Planographic printing method
